

EXAM PRACTICE KIT

12/2019

Question 12.3

The correct answer should be \$2,000 F as the answer has incorrectly added together a favourable and an adverse variance instead of taking one away from the other.

Question 9.6 (solution)

$\$90,000 \times \$(50-21) = \$2610000$, there should not be a \$ in front of the 90000 as this is units not \$.
